

Idaptive + Box

Idaptive helps you secure access to Box and improve user adoption, satisfaction, and productivity. With Idaptive, you can enforce single sign-on and multi-factor authentication policies, automatically provision and deprovision users, and keep your data safe on mobile devices.

Featured Benefits

Reduce Risk

Enforce stronger access policies, reduce the potential of poor password practices, and immediately deactivate Box accounts when users leave your organization.

Accelerate Adoption

Automatically provision new users and enable one-click access to your content and data from mobile devices.

Improve User Experience

Enable users to log in to Box using their existing credentials without having to remember an app-specific username or password.

Integration Highlights

SINGLE SIGN-ON

Idaptive Single Sign-On (SSO) enables a secure and frictionless sign-in experience for both internal and external users. Simply log in to Box, the Idaptive portal, and hundreds of enterprise apps using a single set of credentials to access all of your content and data.

ADAPTIVE MULTI-FACTOR AUTHENTICATION

Adaptive Multi-Factor Authentication (MFA) adds an extra layer of protection when users access Box. Leveraging device, network, and user behavior context, Idaptive intelligently assigns risk to each access request and allows you to create dynamic access policies that require secondary factor authentication when anomalous behavior is detected.

DIRECTORY INTEGRATION

Idaptive allows you to map users and groups in your Microsoft Active Directory (AD), LDAP-based directories, Google Cloud Directory, or Idaptive Cloud Directory to Box. This enables you to specify the authoritative identity source and allow users to sign in to Box with their existing enterprise credentials.

AUTOMATED USER PROVISIONING AND DEPROVISIONING

Idaptive can automatically provision your users in to Box based on their role and group within your corporate directory. With Idaptive, you can easily route Box access requests, create and update Box accounts and personal home folders based on changes in user the directory, and revoke access in real-time when necessary.

REPORTING AND ANALYTICS

Idaptive enables you to use built-in reports or define your own custom queries to gain visibility in to Box access metrics. With Idaptive, you can quickly identify users with access to Box, determine how many times and when Box was accessed by a specific user, and track devices used to access your content and data.

SECURE ACCESS ON MOBILE

With Idaptive, you can automatically deploy the Box application to your users and enable zero sign-on access to your content and data while ensuring that devices are secured and meet your corporate security policies.

Idaptive provides a SaaS-delivered platform to securely manage identity and access for employees, partners, and customers. The Idaptive platform seamlessly combines the fundamental pillars of identity and access management (IAM) – single sign-on (SSO), multi-factor authentication (MFA) and user behavior analytics (UBA). Idaptive enables organizations to improve employee productivity, enhance customer and partner experiences, and reduce the risk of weak or default passwords – the primary cause of security breaches.
