

Idaptive + Concur

Idaptive helps you secure access to Concur and improve user adoption, satisfaction, and productivity. With Idaptive, you can enforce single sign-on and multi-factor authentication policies, automatically provision and deprovision users, and enable one-click access to Concur tools on mobile devices.

Featured Benefits

Reduce Risk

Enforce stronger access policies, reduce the potential of poor password practices, and immediately deactivate Concur accounts when users leave your organization.

Accelerate Adoption

Automatically provision new users and enable one-click access to Concur tools to simplify your travel planning and expense management.

Improve User Experience

Enable users to log in to Concur using their existing credentials without having to remember an app-specific username or password.

Integration Highlights

SINGLE SIGN-ON

Idaptive Single Sign-On (SSO) enables a secure and frictionless sign-in experience for your users. Simply log in to Concur, the Idaptive portal, and hundreds of enterprise apps using a single set of credentials to access your work tools, content, and data.

ADAPTIVE MULTI-FACTOR AUTHENTICATION

Adaptive Multi-Factor Authentication (MFA) adds an extra layer of protection when users access Concur. Leveraging device, network, and user behavior context, Idaptive intelligently assigns risk to each access request and allows you to create dynamic access policies that require secondary factor authentication when anomalous behavior is detected.

DIRECTORY INTEGRATION

Idaptive allows you to map users and groups in your Microsoft Active Directory (AD), LDAP-based directories, Google Cloud Directory, or Idaptive Cloud Directory to Concur. This enables you to specify the authoritative identity source and allow users to sign in to Concur with their existing enterprise credentials.

AUTOMATED USER PROVISIONING AND DEPROVISIONING

Idaptive can automatically provision your users in to Concur based on their role and group within your corporate directory. With Idaptive, you can easily route Concur access requests, create and update Concur accounts based on changes in the user directory, and revoke access in real-time when necessary.

REPORTING AND ANALYTICS

Idaptive enables you to use built-in reports and custom queries to gain visibility in to Concur access metrics. With Idaptive, you can quickly identify users with access to Concur, determine when specific users accessed Concur, and track devices logging in to your Concur instance.

SECURE ACCESS ON MOBILE

With Idaptive, you can automatically deploy the Concur application to your users and enable zero sign-on access to your travel, expense, and invoice management tools while ensuring that devices are secured and meet your corporate security policies.

Idaptive provides a SaaS-delivered platform to securely manage identity and access for employees, partners, and customers. The Idaptive platform seamlessly combines the fundamental pillars of identity and access management (IAM) – single sign-on (SSO), multi-factor authentication (MFA) and user behavior analytics (UBA). Idaptive enables organizations to improve employee productivity, enhance customer and partner experiences, and reduce the risk of weak or default passwords – the primary cause of security breaches.
